KITEBOARDING COLLECTION 2022

A man with a beard and long hair, wearing a black wetsuit, is water skiing. He is carrying a large surfboard under his arm. The surfboard is dark green with a yellow tip and has several yellow straps. He is holding a black handle connected to a rope. The background shows a beach with sand and waves. The text "NOBILE" is overlaid on the left side of the image.

NOBILE

THE ELEMENTS

KITEBOARDING

COLLECTION 2022

Sea is the arena where the Air and the Water meet. When you're standing at the beach, you can become overwhelmed and hypnotized by all that movement.

Especially when the wind is strong.

Once you cross the border between the beach and the sea, your head automatically stops thinking. Your body switches into a different mode – you are now at the mercy of the natural forces.

From the start, the wind is trying to prove you that you are not in your natural environment. Yet, some magnetic force is driving you towards the middle of this eternal spin and movement.

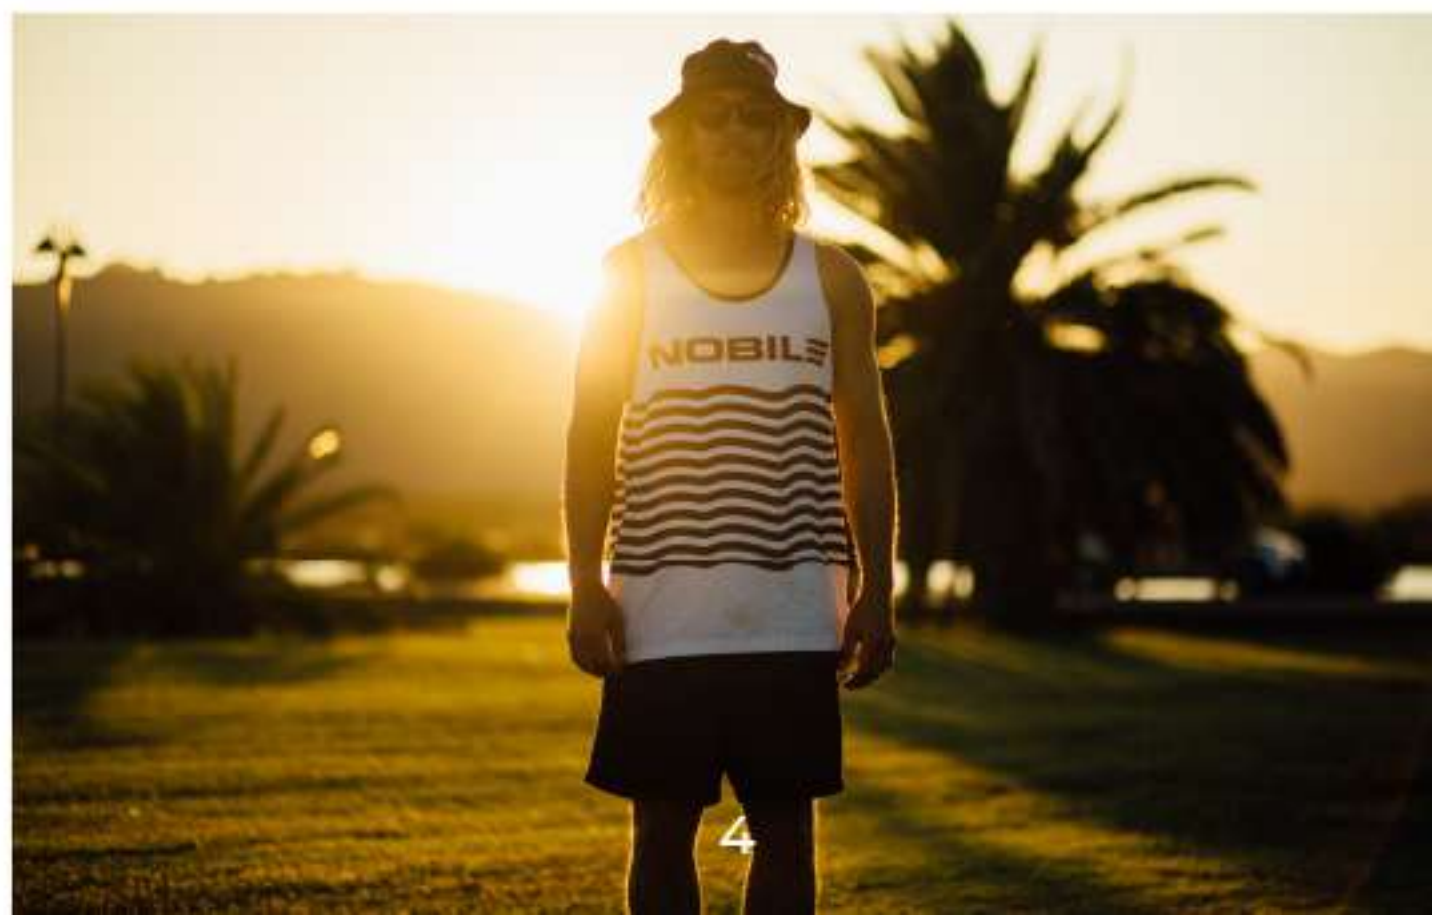

Our respect and humility to forces of nature inspired us to mark the newest collection with the symbols of The Elements.

We would like to introduce to you the world of The Elements – the world of Nobile 2022 - together with Janek "Korek" Korycki.

If you are new here, Janek will show you how to get into #nobileworld, and if we already know each other, join our adventure.

Janek catches the wind and waves since when we know him. You could have seen him when riding the Hawaiian waves, kiting in surfers paradise all over the World. He keeps exploring new trends and leads the way when it comes to new water sports.

Multiple champion in kitesurfing, surfing and wakeboarding. A one-man band who doesn't want to spend any day of his life without adrenaline. He is a part of #nobileteam. He works on development of the equipment, he cooperates with the riders. Janek create the stores and lives his adventures life full of adventures.

TESTING THE ELEMENTS.

Thanks to Janek, every piece of equipment is subject to long-term testing.

Just think about it – designers are trying to figure it out for weeks and months. They are experimenting with some new fabrics, they are checking the aerodynamics, they are profiling. And finally, there it is – the Moment of Truth.

The testing. The new equipment goes on the water for the first time. And it has to have that thing that makes you have great chemistry with the gear since your first try.

It's a true explosion of hormones:

First, dopamine. It is responsible for feeling pleasure.

Later on, noradrenaline. It brings your brain to a state of euphoria. It pumps some additional, extra quantity of adrenaline to your body.

And of course, phenethylamine. It is a sort of natural amphetamine, and it can have some similar, stimulating effects.

Any guesses what else induces the production of the same hormones?

There is one such thing... and it is the first state of falling in love.

Now you know why you are looking for flights connection to the best kite spots.

OK. And how about you? When was the last time when you fell in love?

NOBILE

THE ELEMENTS

Obviously, waves have always been an eternal dialogue between the Elements of Air and Water. These two elements create an everlasting movement, which is a natural habitat for kitesurfers.

And then comes the Fire – this internal force which draws the man in between those two elements.

The internal fire pushes Riders to meet the depths of the sea. This fire is the spirit of adventure.

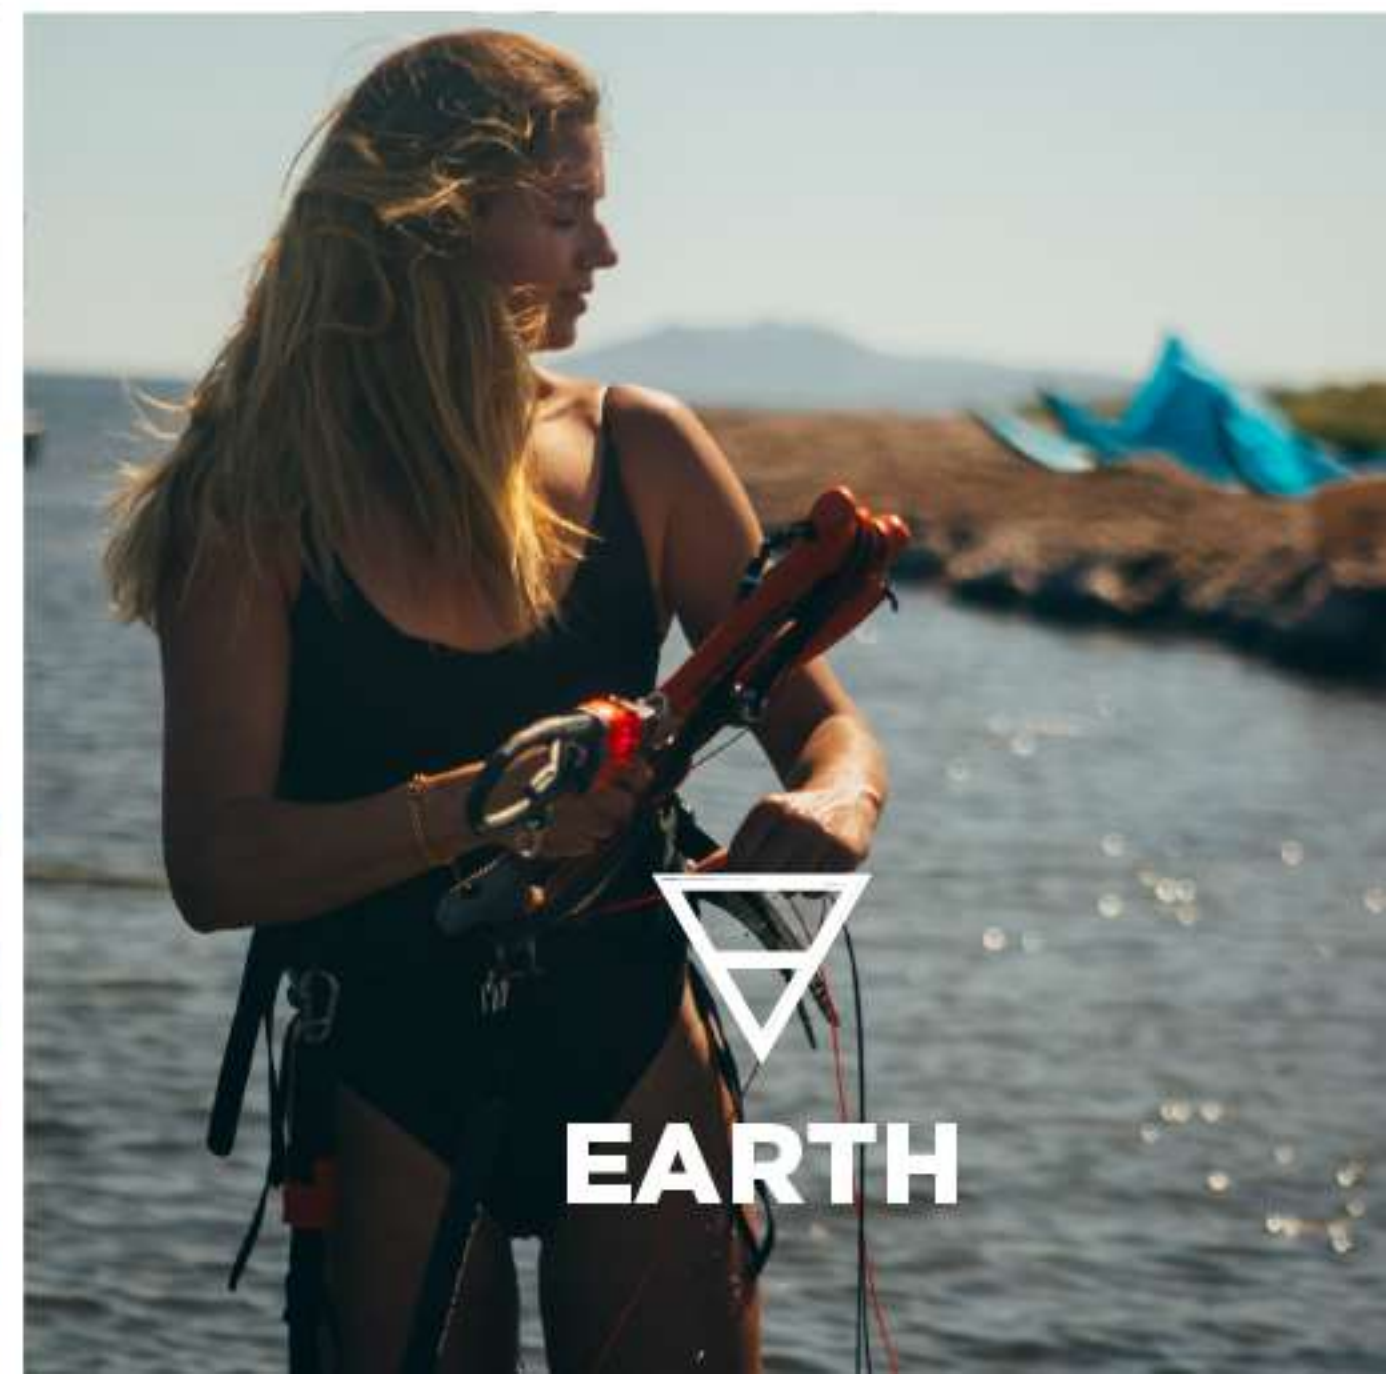

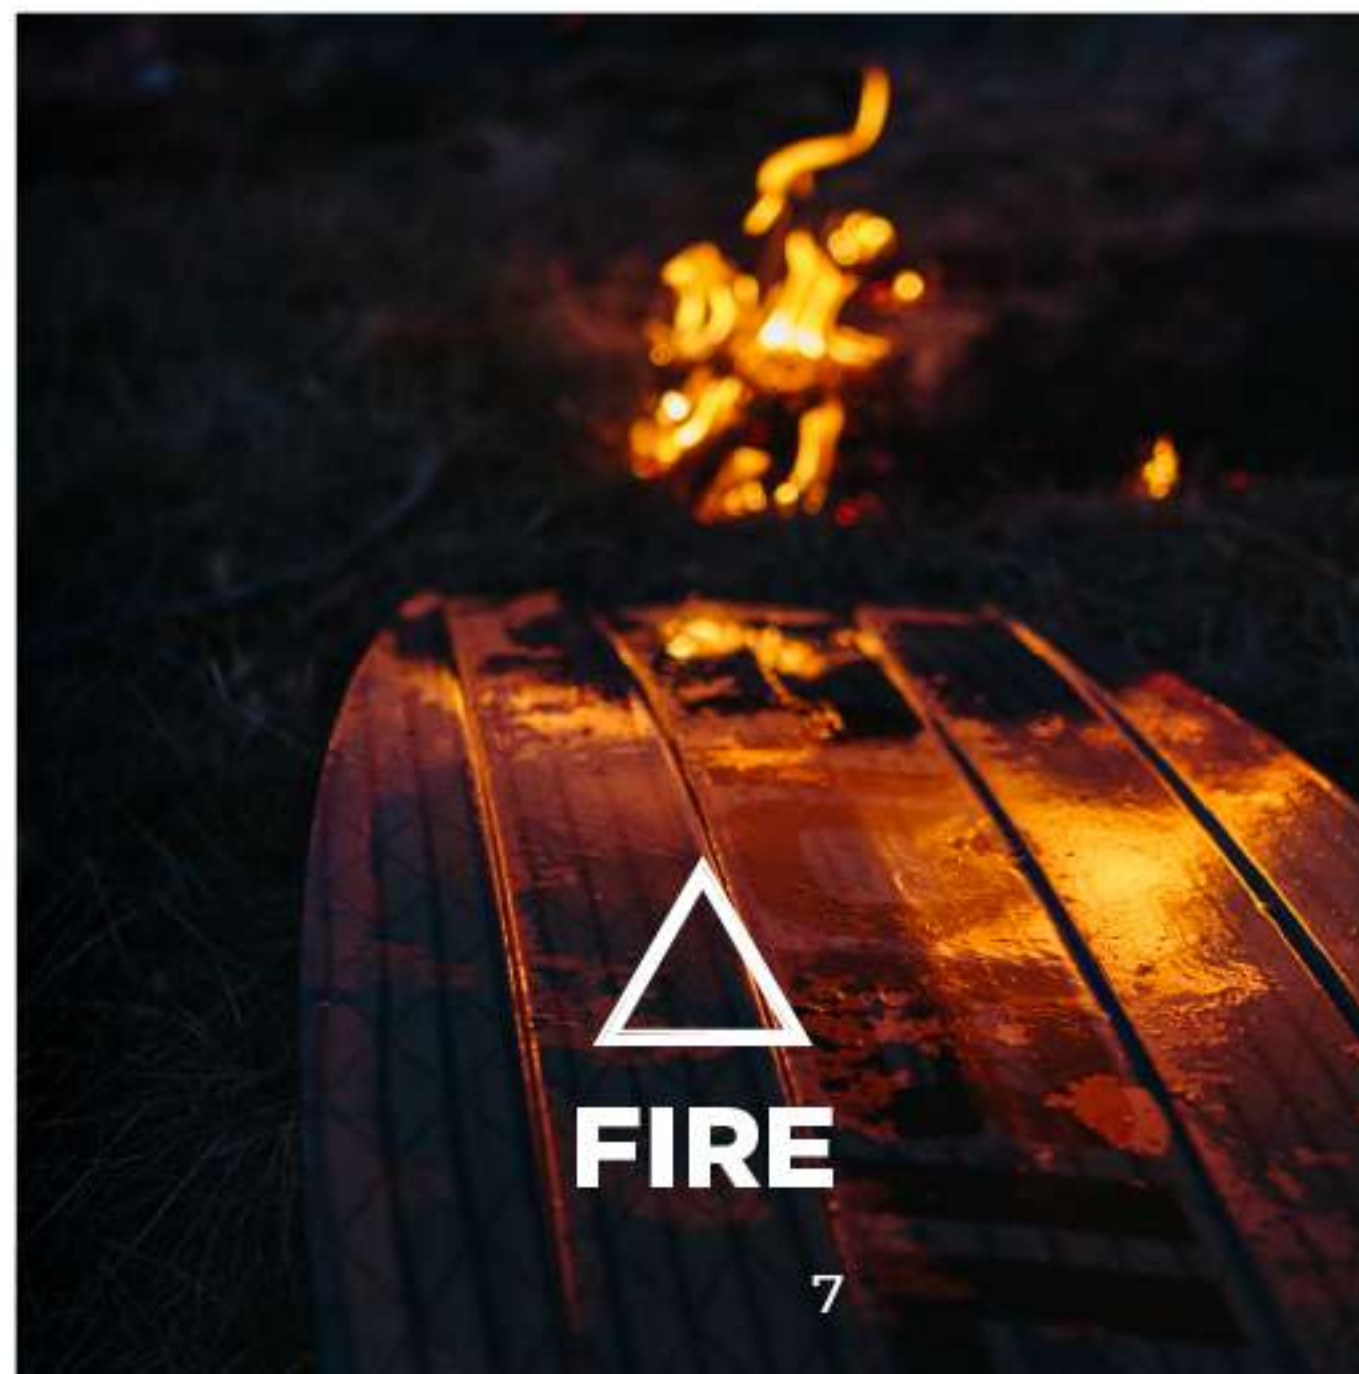

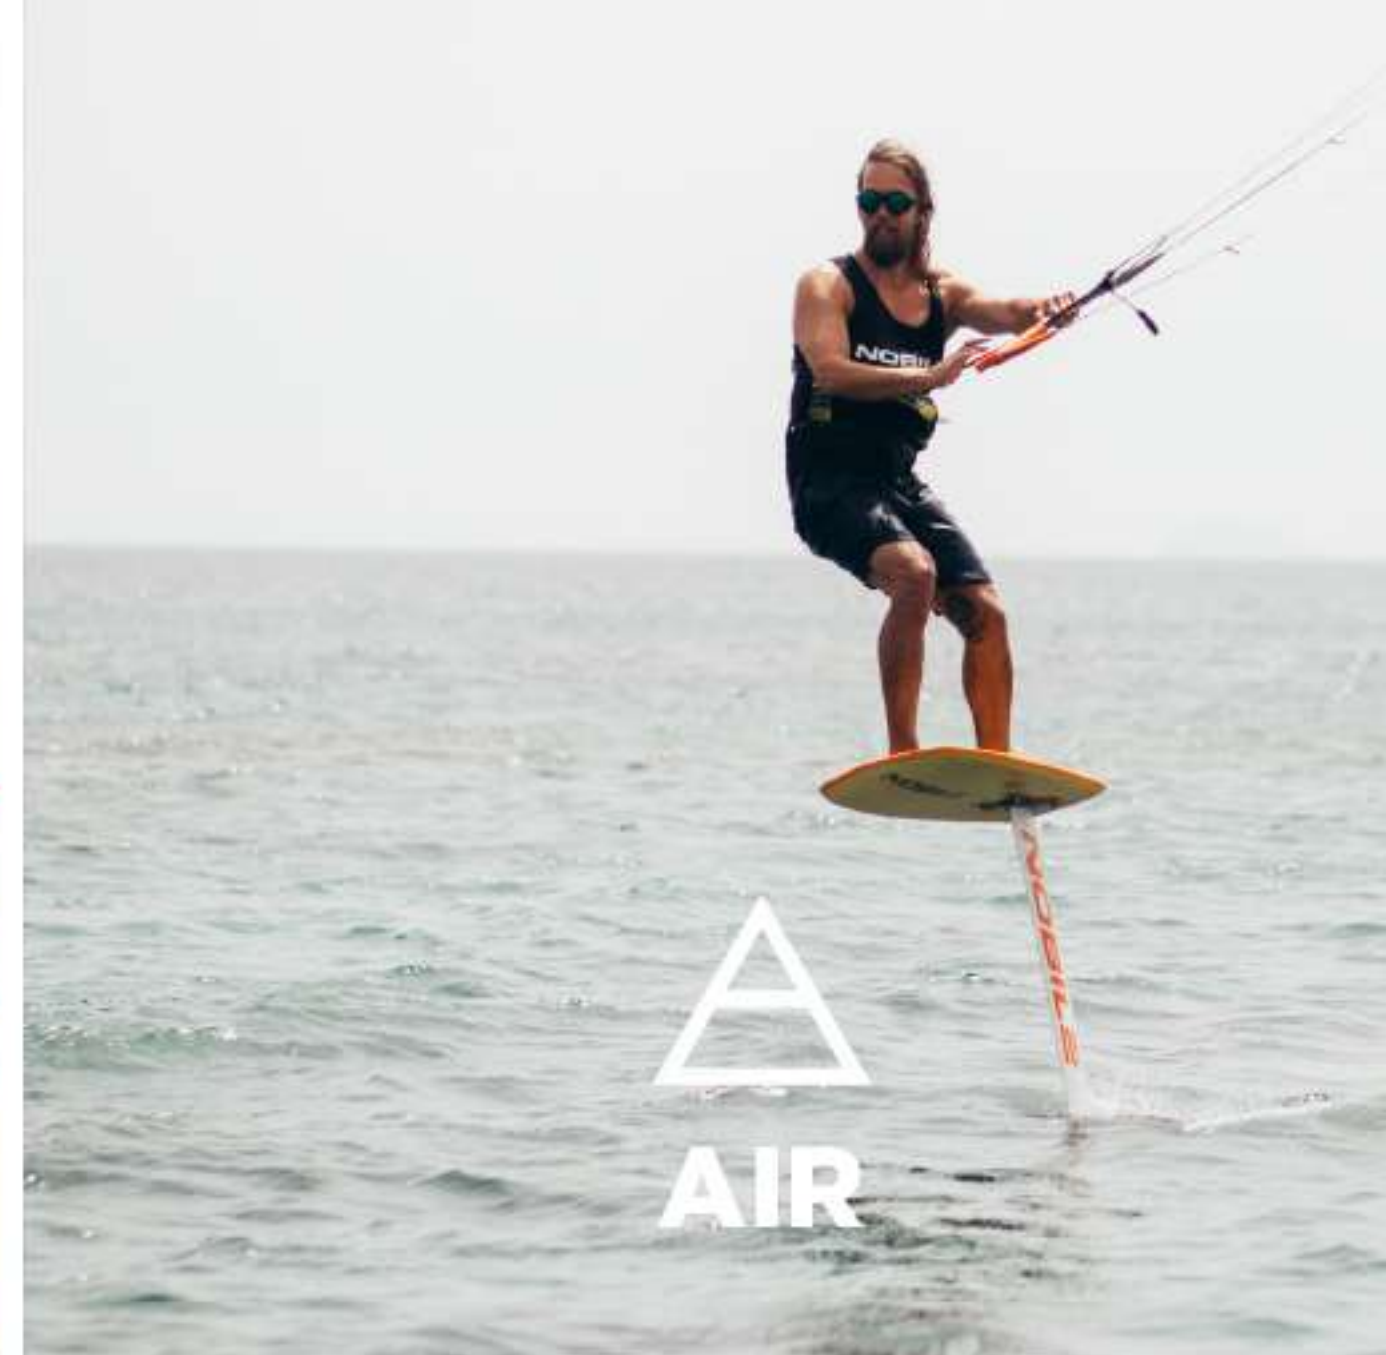

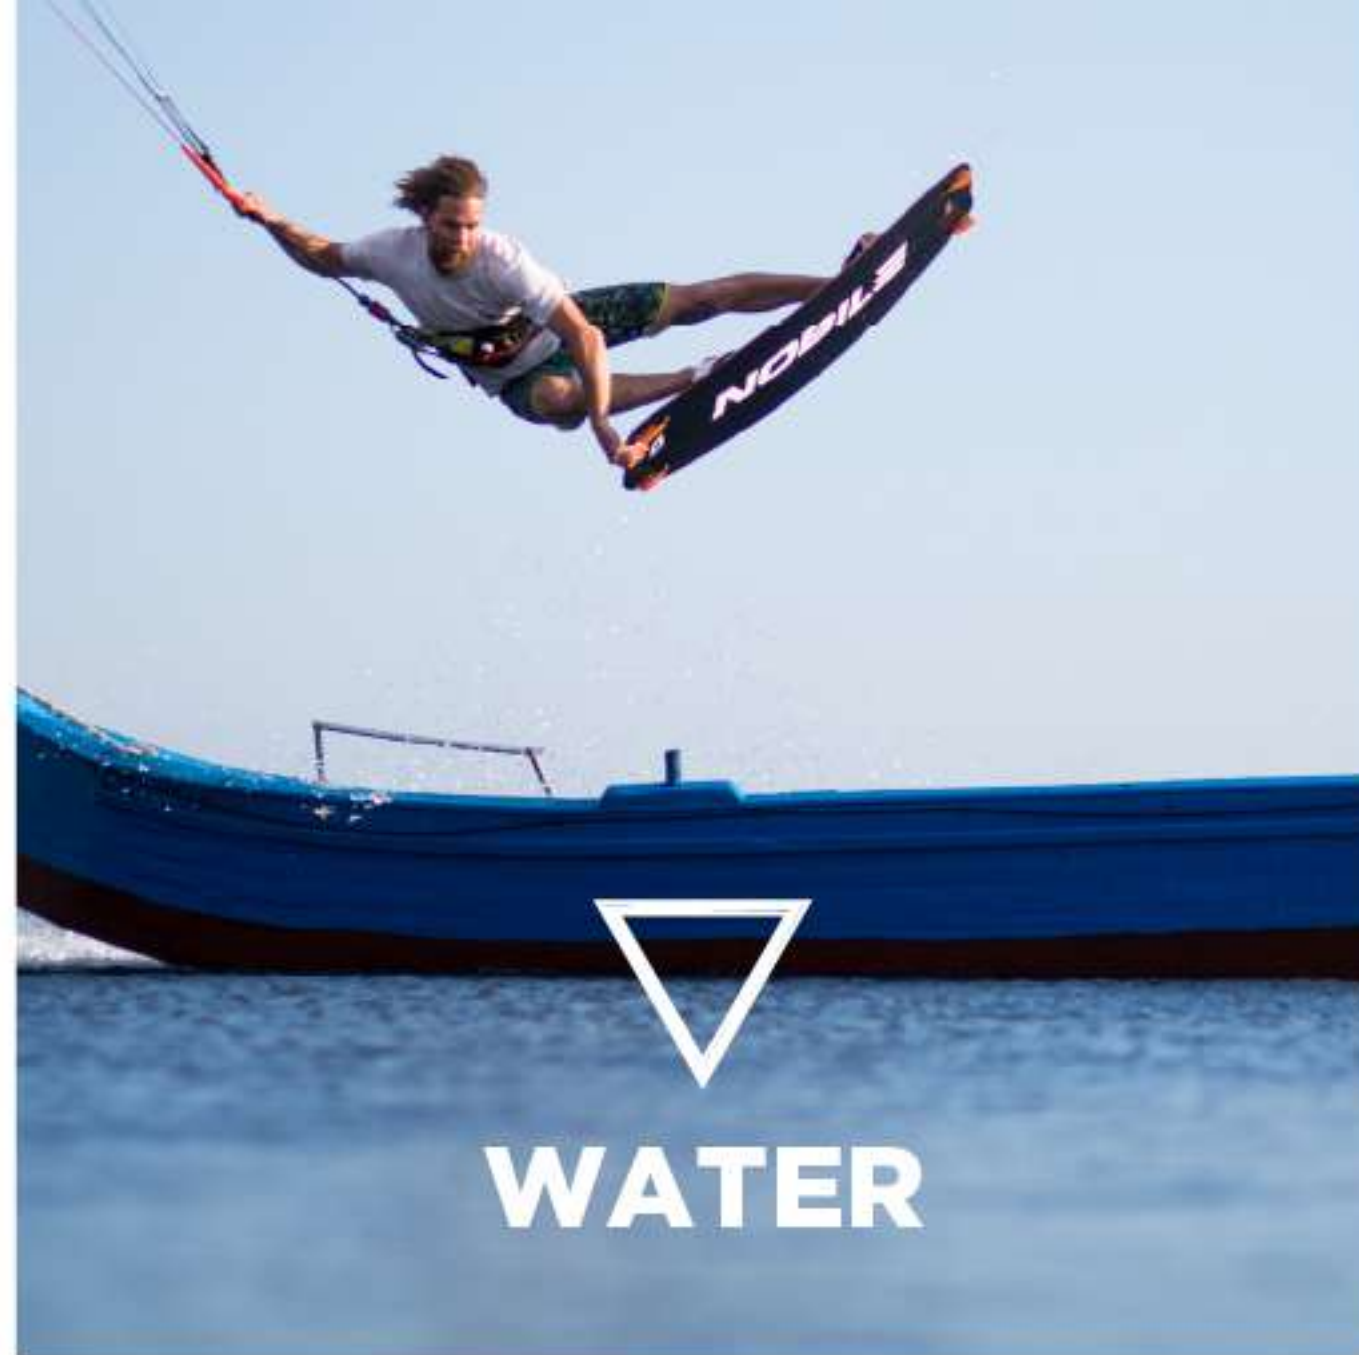

Passion. It enables us to hit the big blue, being equipped only with a board and a kite.

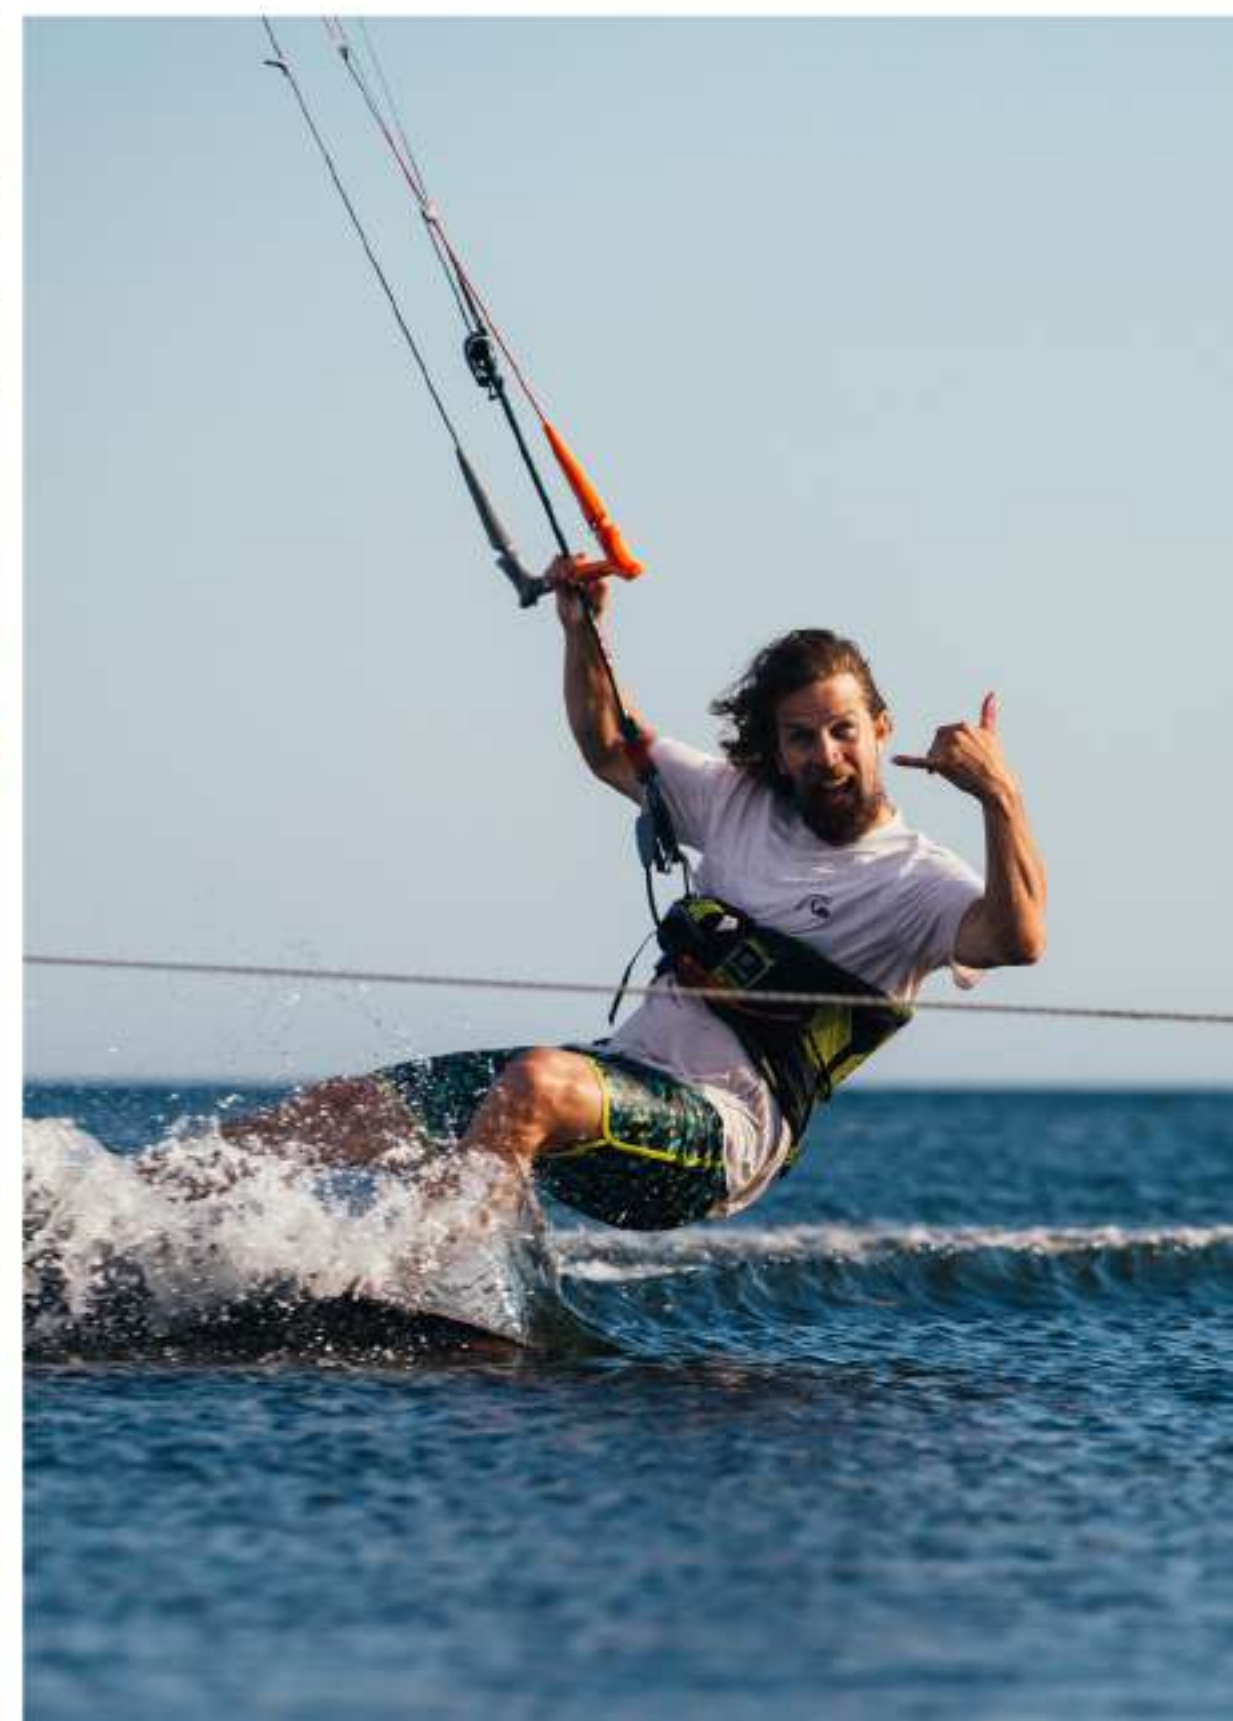

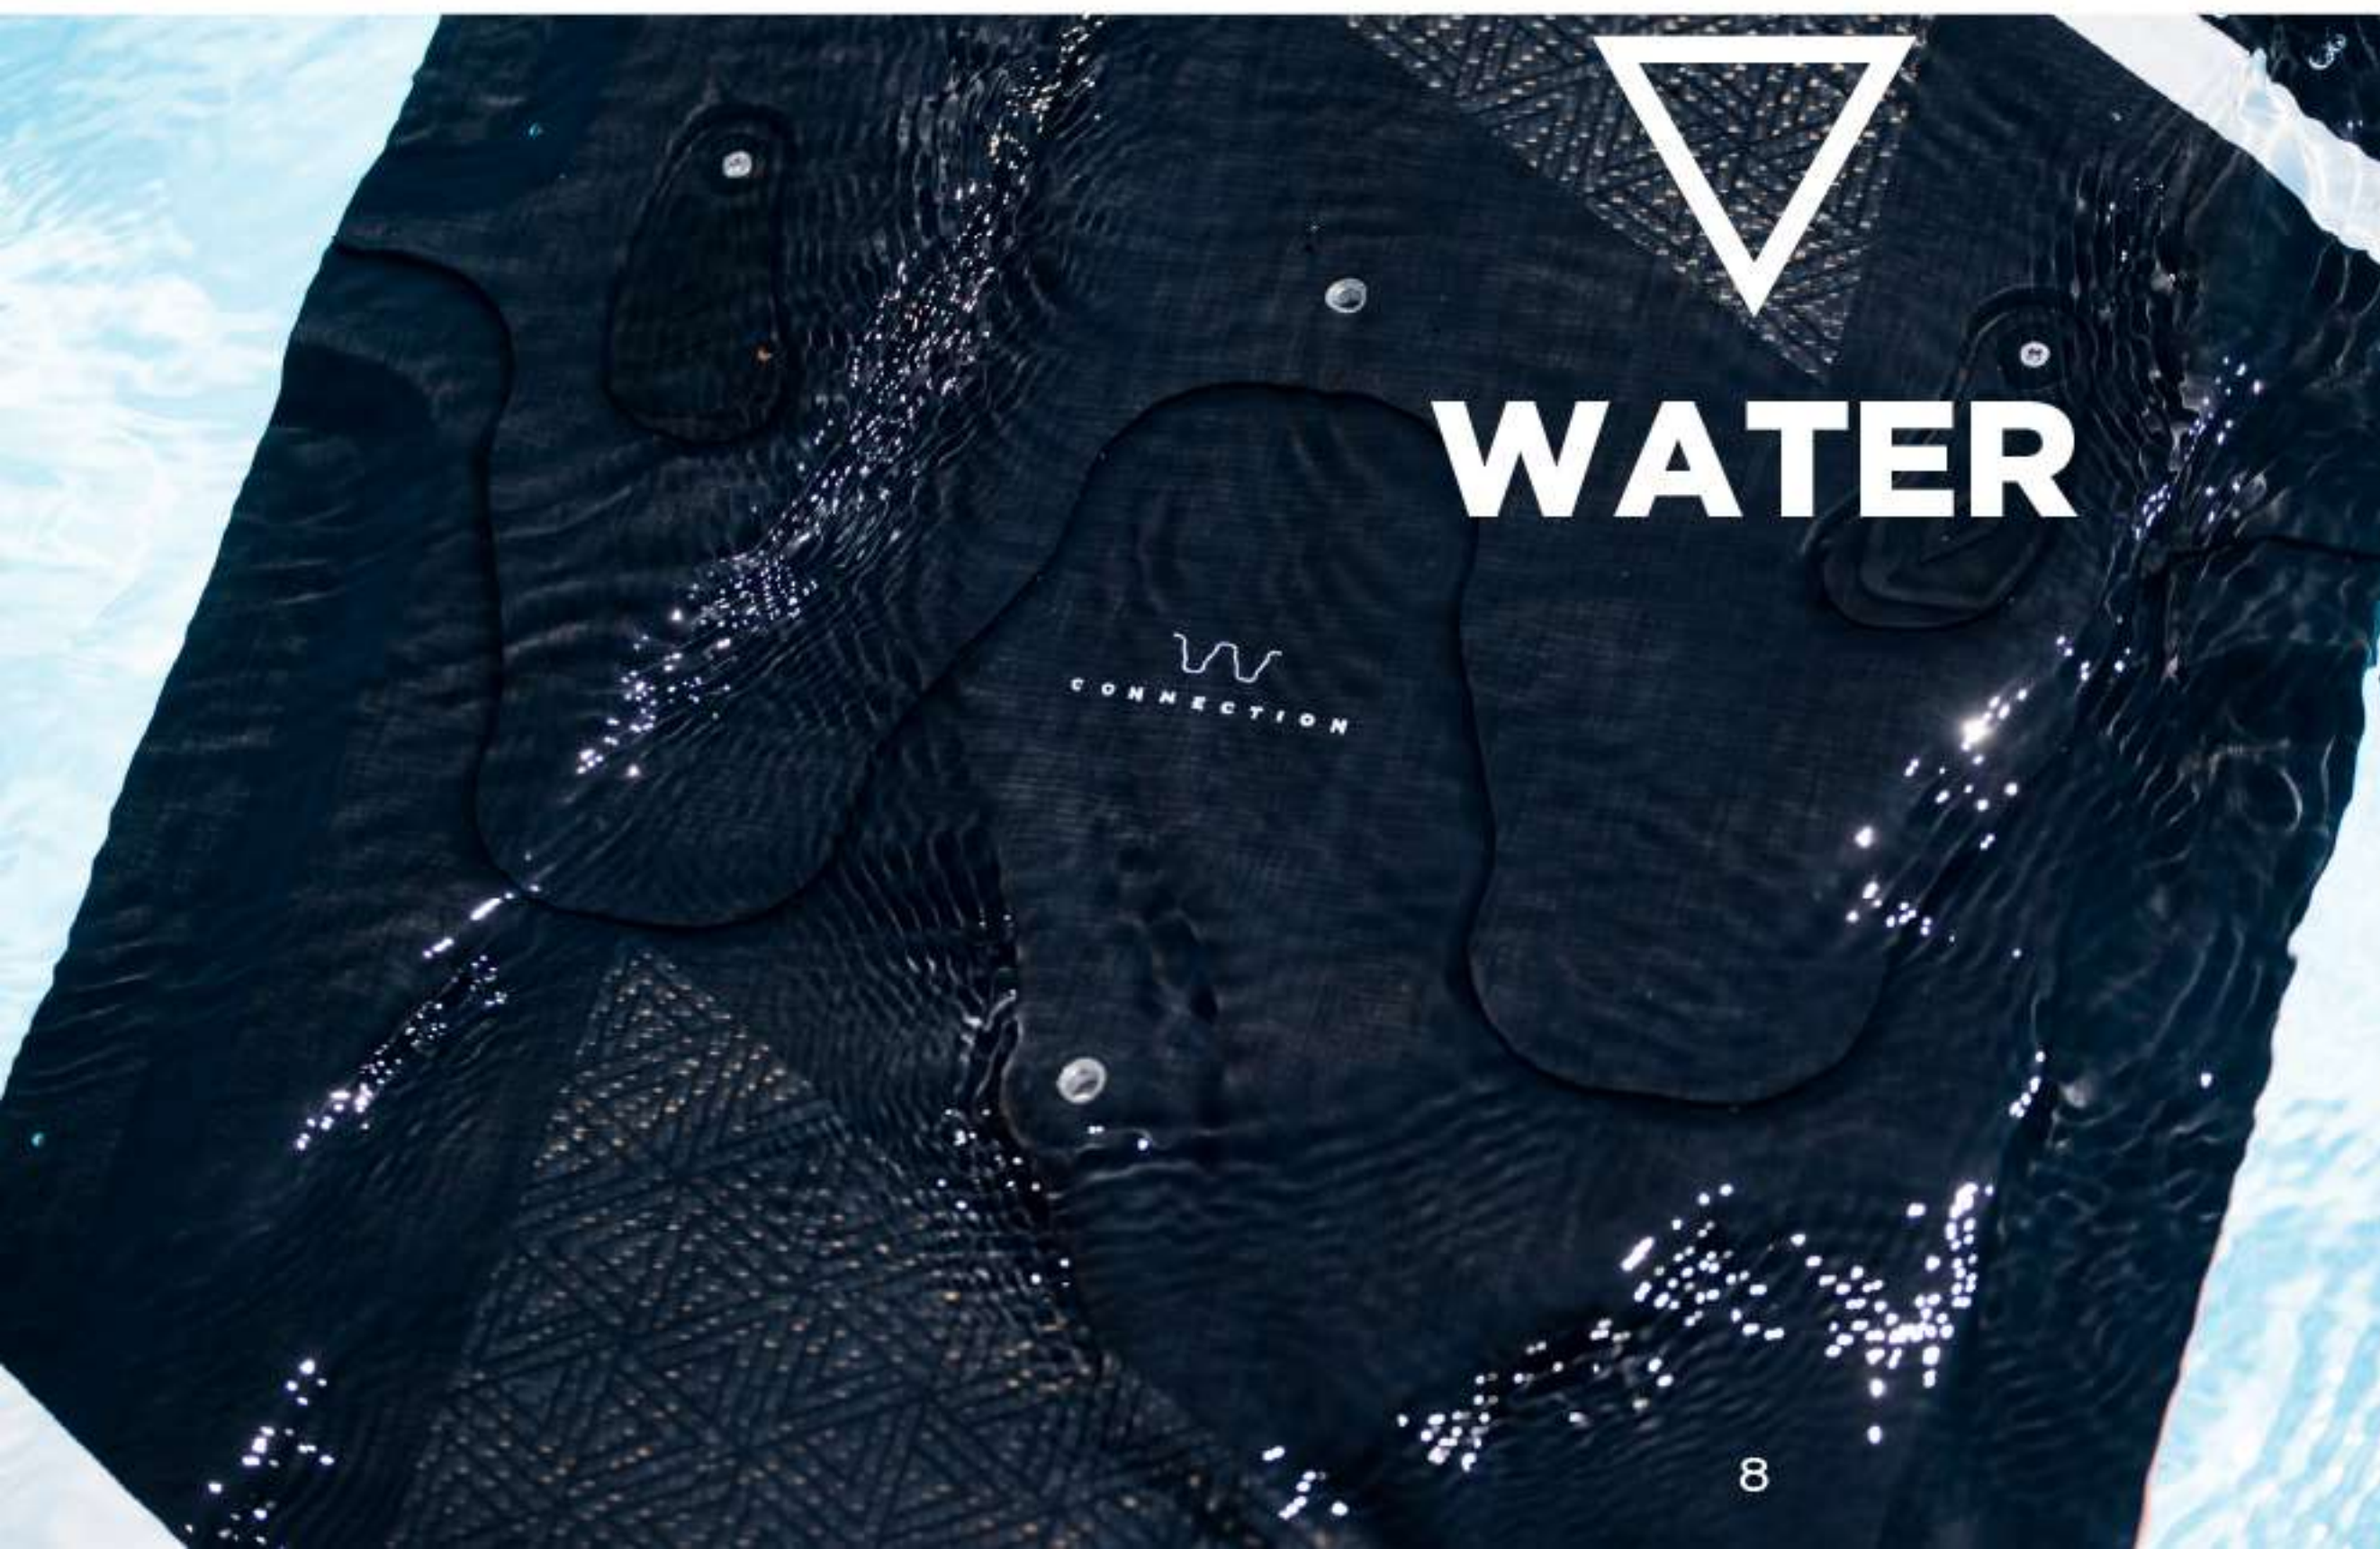

And the Earth element? – It's the beach.

It appears to be dry land, but constant meetings with the elements of water and air make it change all the time. It is our permanent point of reference. It is where our adventure begins and ends. After a good surfing session on a board which is a few millimeters thick, it's good to have the dry land under your feet ...

Unfortunately, those who claim that the alchemy of kitesurfing may work only thanks to these four elements, they are wrong. They forget that all the Elements must be connected by the mythical, Fifth Element.

And in this case, there is no denying that you won't feel magic without good equipment.

WATER

When you are going out to the open sea on your own, you are leaving behind all of the points of reference. You set some invisible goals to yourself, and they all disappear behind you in a flash. The water Element gives you the ebbs and flows of your positive emotions.

NOBILE NHP

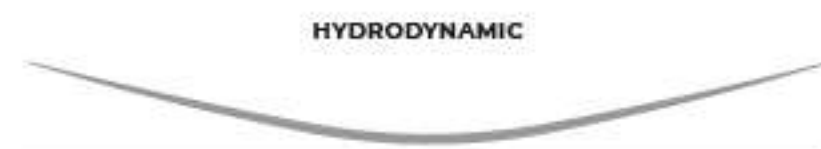

FREESTYLE / FREERIDE

NHP

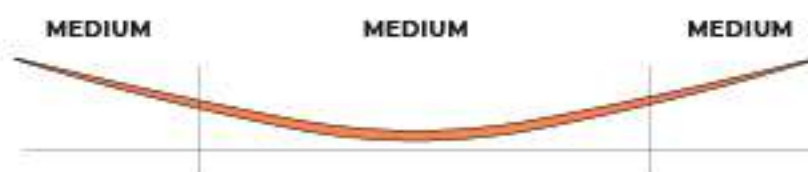

SIZE (cm) : 136x41 / 139x42 / 142x43

NHP is our flagship model, the most universal freestyle and freeride board we produce for over 10 years. Build to perform as well as be the most user-friendly board out there. Performs well in all conditions, from choppy onshore thru wave, kickers all the way to flat water. A combination of bottom channels, Hydrodynamic Rocker Line, and X-Reactive Flex delivers a comfortable ride with perfect control. The asymmetrical shape makes turning and switch riding easier. NHP will be your everyday favourite board.

AIR

Every rider is familiar with this feeling – when you go up above the wave and your body starts to levitate. Is it not about losing the foothold, because it was never there. It's more about the miracle of being able to quickly move on something which is normally slipping through your fingers.

That is what our foil series is here for.

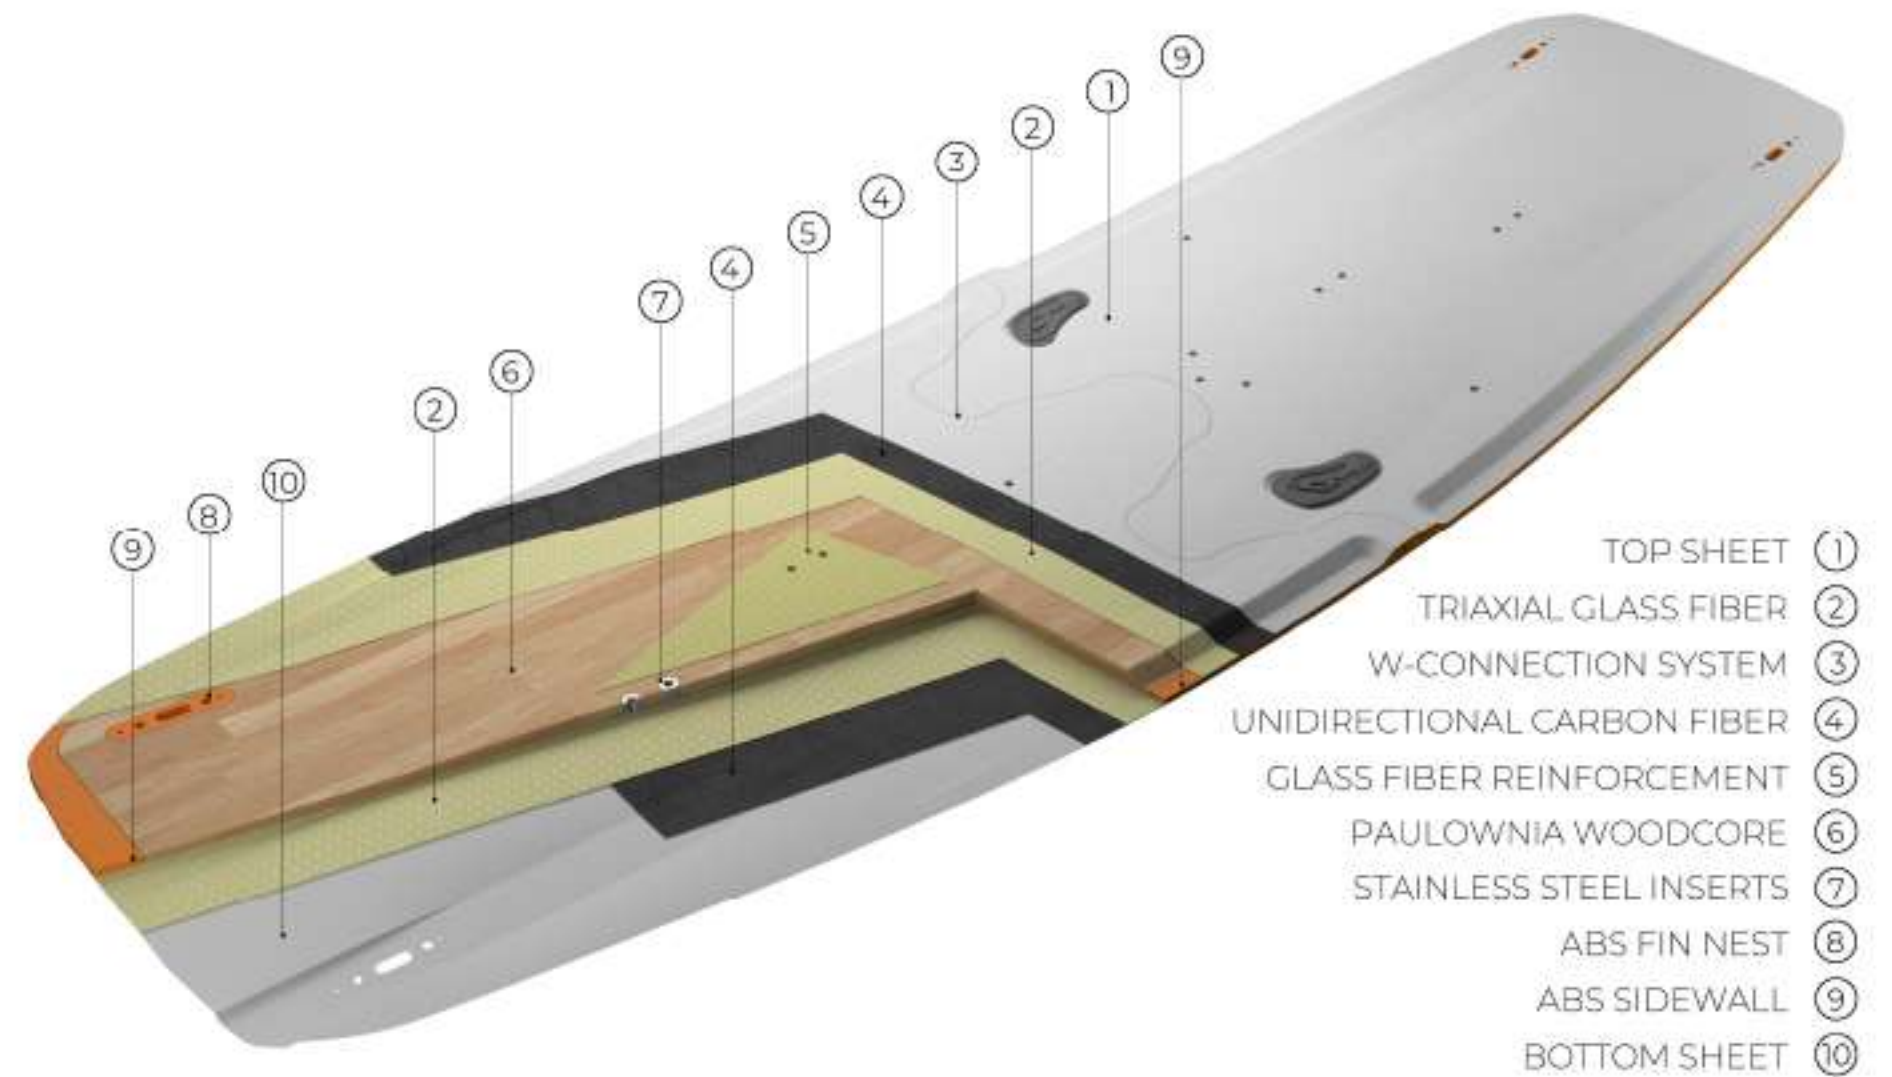

And trust us – this sense of lightness is later on shifted to your everyday life. This is how the Air Element works.

NOBILE

THE ELEMENTS

NOBILE NHP Split Foil

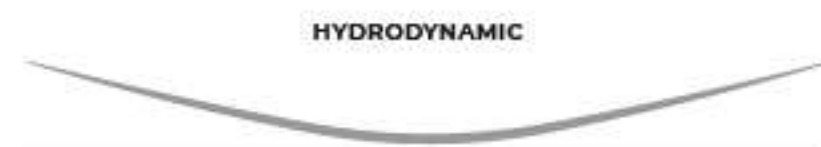

FOIL / FREERIDE NHP SPLIT FOIL

SIZE (cm) : 139x41,5

NHP SPLIT FOIL Responding to a demand from our customers, we designed and produced a specific freeride twintip board for hydrofoiling, the world's first split foil twintip, allowing you the versatility to enjoy a range of wind conditions with just one board, while also offering easier travel and lower transit costs that are enjoyed with a split board. The board has a 3D wood sandwich-construction and a precision designed X-Reactive Flex which, combined with the Hydrodynamic rocker line, translates into a seriously comfortable ride that is forgiving of mistakes, enhances comfort and increases maneuverability. Rectangular channels on the tips and a slightly thicker edge guarantee super upwind performance and stability when riding. The Hydrodynamic rocker also allows the board to perform well in chop, while a Split W-Connection (4th generation) maintains the rocker line and the high-performance capabilities of the board. The split also enables easier transportation and storage and reduces extra luggage charges. It's a true travel-friendly board. We reinforced and stiffened the construction in selected areas to optimize the board for hydrofoil riding. The set-up is super lightweight, making it perfect for cruising and jumping, and has impressive maneuverability. The board can be ridden with straps or strapless. So all you need for your next kite trip is the NHP Split Foil board with our Zen Hydrofoil, easily packed into the Nobile Check-In Bag alongside two kites and all your other travel necessities. No extra costs, and no unwanted hassle at the airport... another travel-friendly solution from Nobile!

THE ELEMENTS

FREERIDE / WAVE V-RIDE

SIZE (m2) : 5 / 6 / 7,5 / 9 / 10 / 12 / 14 / 16

MAIN FEATURES:

- Hybrid shape excellent for wave riding
- Exceptional freeride and wave performance
- Great lift for jumps
- Large depower range, and maneuverability needed for wave riding
- Great control combined with soft bar feeling during all depower stages
- Superb upwind performance
- Extremely light 3 strut construction
- Tough construction and reinforced material made for wave-riding and schools
- Easy relaunch with any kite size and wind conditions
- One pump inflation system with high volume valve
- Front and back bridle trimming options
- More durable bridles with pulleys
- 4 line bar system

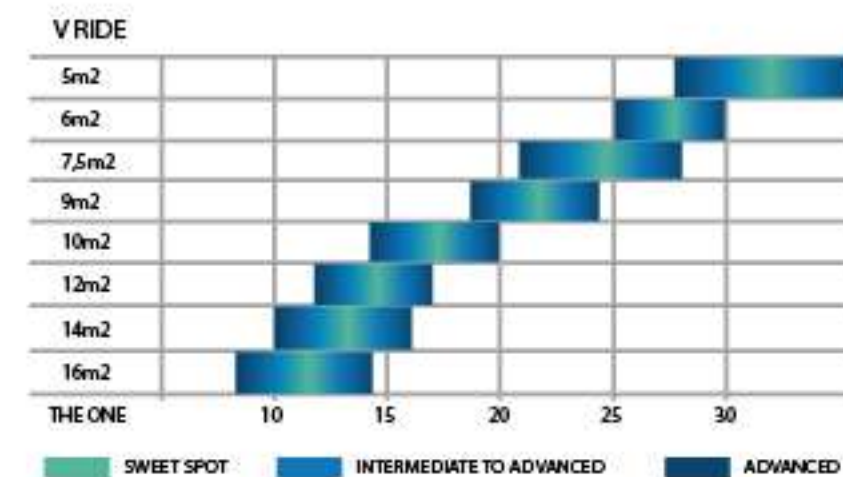

TECHNOLOGY: SHAPE - HYBRID

MATERIALS:

- Teijin double ripstop
- Dacron reinforced canopy
- Internal reinforcements
- Double stitched bonded seams

The Nobile 2021 V-Ride is a universal freeride- wave machine.

The hybrid kites are meant to be user- friendly, easy- handling and maneuverable for tight turns in waves. We took all the experience we had in previous freeride/ wave models like T5 and we took it to the next level. The idea was to improve even more the stability and durability, and still keep the great control in all weather conditions. The V-Ride is a great performing machine in light winds for beginners and schools, as well it keeps great performance in heavy strong wind as typically wave riding is. No matter what conditions, you can count on your V-Ride kite to handle it with ease.

AIR

NOBILE

THE ELEMENTS

FOIL / LIGHT WIND THE ONE

SIZE (m2) : 5 / 7 / 9 / 10 / 12 / 14

MAIN FEATURES:

- Innovative one strut design, excellent for light wing and foil riding
- Exceptional light wind and foil performance
- Great upwind performance and depower, combined with insane turning abilities makes this a perfect foil machine
- Great control combined with light bar feeling during all depower stages
- Superb upwind performance
- 1 strut construction
- Easy relaunch with any kite size and wind conditions
- One pump inflation system with high volume valve
- Front and back bridle trimming options
- More durable bridles with pulleys
- Improved sewing technology and quality
- 4 line bar system

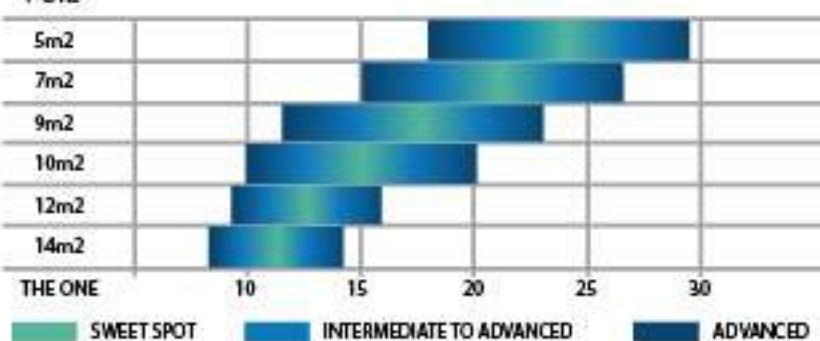

TECHNOLOGY: SHAPE - HYBRID

MATERIALS:

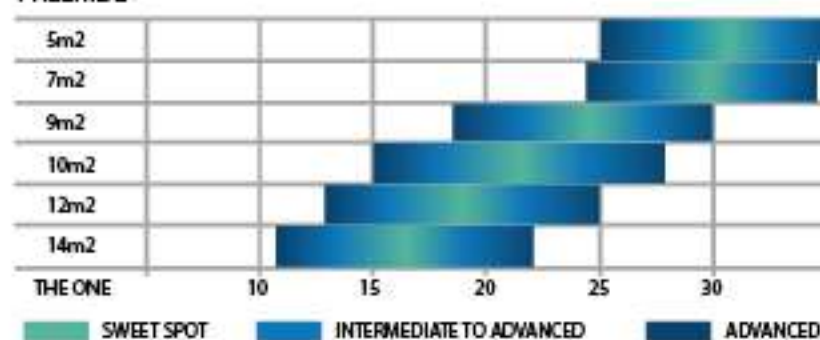

- Teijin double ripstop
- Internal reinforcements
- Double stitched bonded seams

Nobile 2021 The One is the most universal foil and light wind kite ever. Often riding in light wind conditions? This will be a right Kite for you! Even 40% lighter than your average kite, The One will let you ride in conditions you've never dreamed of. Combine that with Nobile Foilboard and you will enjoy kitesurfing in a totally new dimension. Incredible Low end performance making The One ride in lighter wind than you ever thought is possible. Insane maneuverability is the key to The One's success, it simply takes kite-loops into another level allowing you to generate power in almost no wind. Insane upwind and downwind performance, that allows you to quickly tackle up and down wind. Water relaunching haven't ever been that easy, no matter what wind conditions or kite size, The One will relaunch without any trouble. If light wind sessions is your daily basis than The One is defiantly a Kite for You!

FOIL

FREERIDE

BAR CONTROL STICK

SIZE (m2) : 52cm / 46cm / 36cm

MAIN FEATURES:

- ISO 21853 compliant safety system: quick release and leash
- Sizes: 52cm, 46cm, 36cm (with long freestyle c-loop as standard)
- 23m durable Liros DC 401 flying lines
- Anodized aluminium control stick with comforty EVA grip
- Leader line and safety line hidden in single PU depower tube
- Soft EVA bar ends and floaters
- Easy and user friendly clamcleat depower system

New bar from Nobile Sports will meet all Your expectations. We prepared a totally new construction, eliminating all bugs that we discovered over all these years of tests. Control Stick is a fully aluminium clean and simple bar that delivers more than enough comfort and control to every user. This product fully comply ISO 21853 standard, which is a large step forward for us.

Available in three sizes: 52cm 46cm 36cm- this one comes with larger freestyle chicken loop. Most important features are two different sizes of Trip loops to deliver a right type to all kinds of riders. New ISO patented quick release, very simple to reconnect. New ROTO HUB that will help you get your lines straight after spinning one too many times. Another important feature is a smooth roller for deposed line, this part will ease your de power adjustment by far. Adjusting depower once riding haven't ever been so easy before. Same with new lock system for de power line, with a smart velcro grip the deposed line won't tangle around your face no more.

Thanks to integrated EVA bar floats, the control stick will float on top of the water no matter what. New bar opening made out of marine grade stainless steel combined together with single PU coated line, gives even more control and bar feel than ever before. Bar comes with 23 meter Liros DC 401 lines, Kite leash and Bar Bag.

NOBILE

THE ELEMENTS

FOIL

ZEN HYDROFOIL

PROBABLY THE MOST ADVANCED AND TESTED ALUMINIUM-COMPOSITE HYDROFOIL EVER MADE!

The result is the product of the highest quality, based on the Human Concept philosophy. It's probably the best aluminum-composite hydrofoil on the market. We also wanted it to be user-friendly, safe and full disassembly, so you can pack it into a compact-sized luggage. We recommend our custom-made "check in bag" which meets the criteria of airlines in terms of the maximum size of registered baggage. We have called our hydrofoil Zen, because when you ride on it, your mind becomes free and your thinking clear as the water surrounding you.

MAIN FEATURES:

- easy to ride and manoeuvrable
- high safety level
- solid and stiff construction
- steering precision
- fully anti-corrosion seal makes the construction immune to unfavourable conditions, such as salt water.

FUSELAGE

Length (cm): 64

The Fuselage is made of Aluminum used in aviation industry. Milled and turned in lab conditions on CNC machines. Carefully selected cross sections and well-designed slots securing wings and mast minimize resistance, while increasing durability and rigidity of connection with other components. Additionally anodized in order to protect it against the salt water.

Fuselage is offered in two options: dedicated for Carbon Wings and for operating with G10 Wings and Vertical Fin.

MAST

Length (cm): 35 | 60 | 86 | 96

The aluminium mast is extruded from the material used in the aviation industry and protected against salt water during anodizing process. It is extremely light and stiff to the maximum. Thanks to the non-drag profile, it has very low resistance in the water.

MOUNTING PLATFORM

It's a pivotal point of the whole construction, connecting the hydrofoil with the board. Made of high-quality aluminum to make it super-stable and maximally durable. Anodized for long term use in salty water.

Spacing: 135-195x90 mm

CARBON AND G10 FOIL WINGS COLLECTION

When designing our wings, we set ourselves the important goal that they should be stable, but at the same time be fast, light, durable and easy to maneuver too.

With this goal in mind, we found ourselves inspired by the wings of the mesmerizing Kolibra bird... The course of nature is rarely wrong. These little birds have behind them tens of thousands of years of evolution that have gradually allowed them to achieve their astonishing flight parameters, flying at speeds of up to 120km per hour, with an ability to hover in one place, and move sideways and backwards in flight. What better inspiration for our R&D department, who were inspired by the exquisite natural design of the hummingbird's wings, creating two separate hydrofoil wing lines: a standard foil with durable G10 material, and a carbon foil with curved ends.

CARBON SURF WING

Works with low wind, very quick start still with insane maneuverability. This set will allow you to enjoy all the fun that hydrofoiling gives in lightwind conditions.

- Surface: 1300cm²
- Span: 75cm
- Aspect ratio: 4,3

CARBON SURF STABILIZER

Wide span and larger surface stabilizer dedicated for Carbon Surf Wing.

- Surface: 230cm²
- Span: 34cm

CARBON FREERIDE WING

Versatile wing for every user, large surface allows quick start still allowing to gain large speed and good maneuverability that gives an unique feel of freedom.

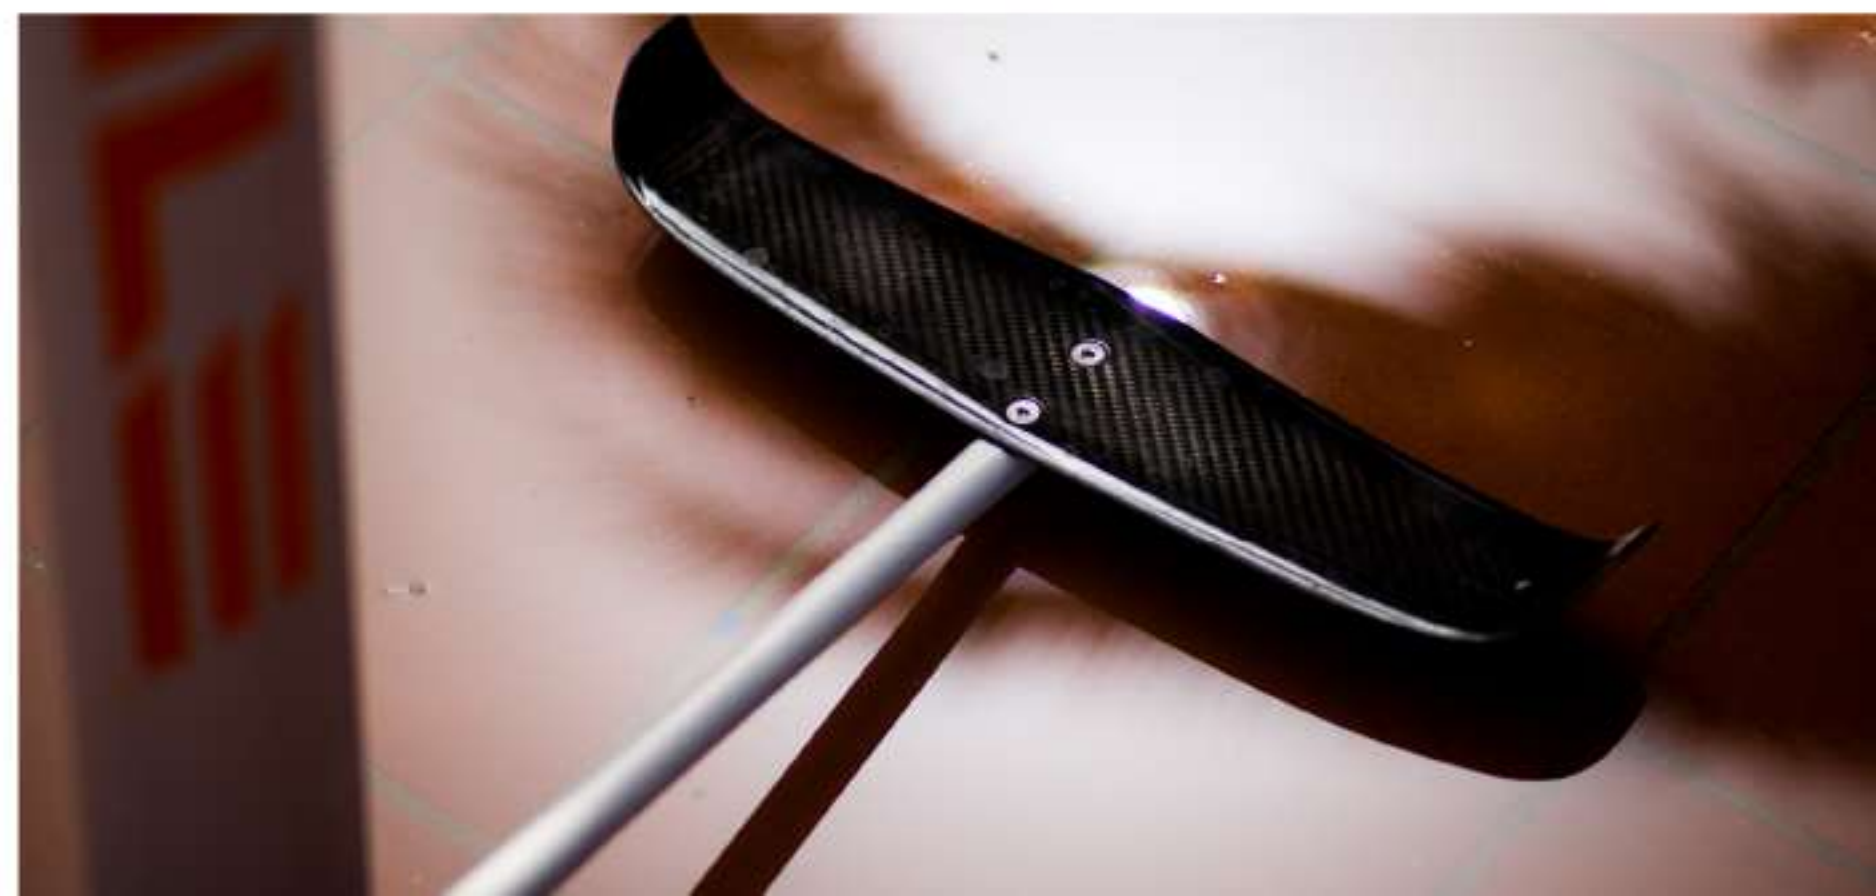

- Surface: 800cm²
- Span: 60cm
- Aspect ratio: 4,5

CARBON FREERIDE STABILIZER

Universal stabilizer compatybile with Carbon Freeride Wing.

- Surface: 230cm²
- Span: 34cm

CARBON RACE

Very fast wing for experienced users, thanks to this wing one will be able to get to know what blasting on a foil really means. Turns well, relatively small surface, experienced users only.

- Surface: 510cm²
- Span: 64cm
- Aspect ratio: 8,0

G10 FREERIDE

Begginsers and intermediate wing, for users that prefer relaxed riding. Easy takeoff, very stable but still allows to go fast. Its preferred as your first wing, when starting a hydrofoil adventure.

- Surface: 800cm²
- Span: 60cm
- Aspect ratio: 4,5

G10 RACE

Very fast wing for experienced users, thanks to this wing one will be able to get to know what blasting on a foil really means. Turns well, relatively small surface, experienced users only.

- Surface: 510cm²
- Span: 64cm
- Aspect ratio: 8,0

CARBON RACE STABILIZER

Thin profile stabilizer compatible with Carbon Race Wing.

- Surface: 220cm²
- Span: 38cm

G10 WAVE

Intermediate users wing. Once you've got the allround wing going, its time to step up and try our 2nd step wing. Dedicated to users that expect lots of fun and ease out of their session. Remains relatively large but still allows to go very fast.

- Surface: 700cm²
- Span: 60cm
- Aspect ratio: 5,1

G10 STABILIZER

Universal stabilizer for all G10 Wings.
Surface: 230cm²
Span: 34cm

FIN

The 40 mm Nobile fin is made of G10 material and serves as an extra yaw stabiliation for G10 wings and G10 back stabilizer. You can use other sizes of Nobile G10 fins as well.

ACCESSORIES

IFS NEXT

UNISIZE

2 complete pads + set of screws and grab handle

IFS Next is a generation pad from Nobile Kiteboarding for 2021 collection. Very firm, still soft pads will make your kite session more pleasurable than ever before. Those insanely adherent straps, with advanced adjustment system in every surface, allows to firmly adjust to every foot no matter what your foot size is. There is nothing more important then feeling confident regarding the control of your board. So forget about feet falling out of foot straps, and enjoy the new IFS Next.

NOBILE

THE ELEMENTS

CLICK&GO G10 FINS

SIZE (MM): 20, 30, 40, 55

Nobile G10 fins are made of stiff glass composite which guarantees high durability. This material makes the connection between fins and the board very strong, while keeping the low flexibility of the fins. This ensures the high level of control when riding. Nobile G10 fins are compatible with the tool-free "Click&Go" mounting standard and can be used interchangeably with PA fins. The „ultra orange“ colour of the fins is superbly visible from the distance, so losing your precious kiteboard in the water is impossible.

CLICK&GO PA GF33 FINS

SIZE (MM): 55

Nobile PA GF33 fins are made of 33% glass reinforced PA (Polyamide). Fins are made in extremely highly-visible „ultra orange“ to let you know where did you drop your precious kiteboard. It features the same durability as G10 Epoxy but is much lighter. 33% glass reinforced PA fins become a standard in all Nobile boards.

BAGS

CHECK IN BAG

This bag is perfect for all your trips and you will find enough space for everything!

SIZE: 90 x 48 x 20 (cm)

WEIGHT: 2,35kg

DESCRIPTION:

This bag is perfect for all your trips and you will find enough space for everything! But we created the Check Inn Bag especially for travelling with the Nobile Zen Hydrofoil, Infinity Split Foil 5'2", two kites, bars, pump, wetsuits, as well as your favourite T-shirts. You can carry it on your arm – but what for, since there are durable wheels which allow you to pull the bag behind you on wheels around the world. The comfort and the elegance – because life is better when you are travelling!

TECHNICAL FEATURES:

- Secure straps on inside and cut side
- PVC coated 600D polyester
- Durable, high density protective PVC bottom with padding
- Double "tight up" straps
- Shoulder strap
- Carry handles
- Durable zip
- Puller system
- Easy handling

The bag is compatible with the following gear:

- Nobile Zen Hydrofoil (with MAST 60 cm and 86 cm)
- Infinity Split Foil 5'2"
- NHP Split 130cm, 134cm and 138cm
- NHP Carbon Split 134cm and 138cm
- Flying Carpet Split 160cm

BAGS

MASTER TRAVELBAG

This bag is perfect for all your trips and you will find enough space for everything!

SIZE: 146 x 45 (cm)

DESCRIPTION:

Are you going to travel with your board? Make sure you have got your gear protected. Perfect bag for taking one set of kiting gear. It features a tough exterior to take as much abuse as a baggage handler can throw at it. The longest board it will hold comfortably.

ROCKER LINES

CONTINUOUS

A continuously increasing rocker bend from the middle of the board toward the tips is cut from the circumference. This kind of line gives a predictable and an anticipated feeling from the board, and there are no surprises during pops and bends.

FLAT CONTINUOUS

A slightly increasing rocker bend from the middle of the board toward the tips is one of the most effective solutions, giving the rider arguably the most beautiful thing in kitesurfing: solid speed with continuously good pop when jumping. A continuously increasing rocker bend from the middle of the board toward the tips is cut from the circumference. This kind of line gives a predictable and an anticipated feeling from the board, and there are no surprises during pops and bends.

HYDRODYNAMIC

An aggressive rocker line which is responsible for pop and control during jumps during quick turns and high speed.

FLAT HYDRODYNAMIC

A flat and gentle bend ensures good stability and a smooth speed increase: a very important element in the early kitesurfer training stages.

DIRECTIONAL

A directional line rocker based on a classic surfing line, with a flat tip and a long board nose, which has been modified to guarantee the perfect ride as well as perfect wave-turning capability.

FLAT DIRECTIONAL

A directionally flattened line of a classic wave rocker gives very fast acceleration and control when turning in low-wind conditions.

ADVANCED FLEX ENGINEERING

SOFT, MEDIUM, HARD

ADVANCED FLEX ENGINEERING

AFE has been introduced into Nobile products to control every part of the board's flex. However, we've divided it into three main zones: Tail, Center and Nose, as well as a three-step scale: soft, medium and hard.

SOFT FLEX

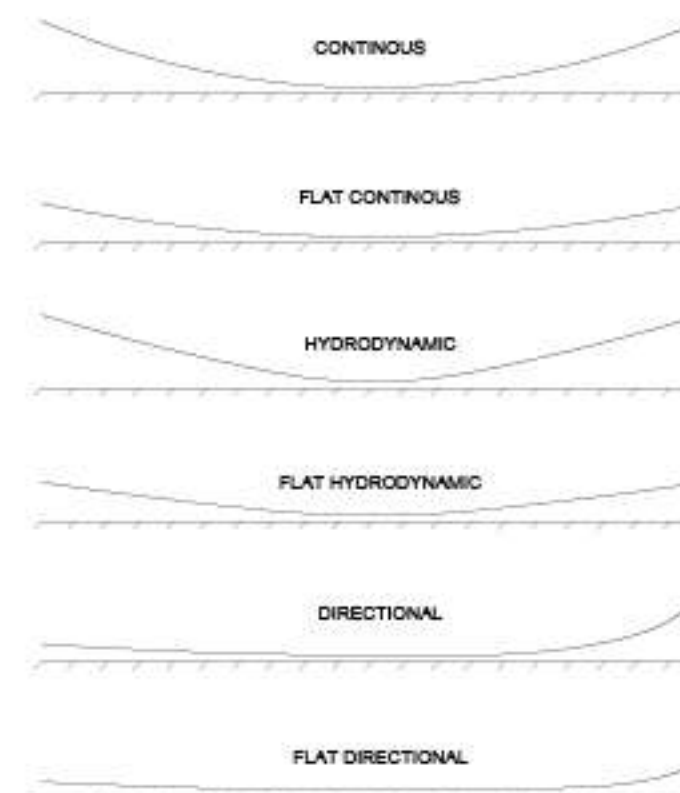

This is the most comfortable and friendly type of flex in our boards, giving you full freedom when riding and turning, and forgiving all the minor mistakes at the same time. It guarantees you unbelievable pleasure during the ride and reduces chop on the water.

MEDIUM FLEX

Created for keeping top performance of the board, while maintaining comfort during the ride. Reaction to transferred impulses is fast, so the board can be controlled easily.

HARD FLEX

Designed for the most demanding and technical riders, ensuring immediate response, perfect control and some mega pop. Uncompromising boards, prepared perfectly for any given kitesurfing technique. In our 50/Fifty wakestyle board we have introduced Negative Flex, which is important for those who ride in boots. This is also in our three-step scale and three board zones as well.

MODEL	SIZE	DESTINY	BOTTOM SHAPE	ROCKER	FLEX	WEIGHT	STANCE	RIDER WEIGHT	SPLITBOARD (FOLD UP)
NT5	134/41	FREERIDE	WAVY CHANNELS	CONTINUOUS	S/M/S	2,70	561,1 - 611,1	50 - 70	-
